

BRASS TRAIL – FACTSHEET

Here are some of the plants, birds and a reptile that you can find on the Brass Trail. The middle column shows you the symbol to look for on the Trail, together with some information.

chiff chaff	1  Glyn Baker	B2 	I am a small, olive brown warbler. I flit through trees and shrubs and wag my tail. I eat insects on trees, and fly out to snap them up.
green woodpecker	2  QHWWeb	E3 	I like short grass so I can feed on the ground. I love to eat ants. I breed in the holes I peck in dead wood.
scarlet pimpernel	3  Pauk	F3 	Look for me in the summer, close to the ground. I only open my small petals when the sun is shining. Some people think I'm a weed.
heather	4  Jim Champion	G6 	I turn the Hill pinkish purple in late summer. I like dry, acidic soils. Bees and insects love the nectar I hide in my bell-shaped flowers.
St John's Wort	5  Glyn Baker	D6 	I am found in open rather than shady places. Some people think I am a medicinal plant. My pollen attracts bees and other insects.
lizard	6  Dave Green	C6 	I am a reptile (cold-blooded) and I have scaly skin. I love to bask in the sun. I can move very quickly. I like to eat small insects such as flies, grasshoppers and spiders.
whitethroat	7  N P Holmes	C5 	I am a warbler. You can see me in spring, summer and autumn but I fly to Africa in the winter. I eat insects, berries and fruit.
